Guidelines for flying drones

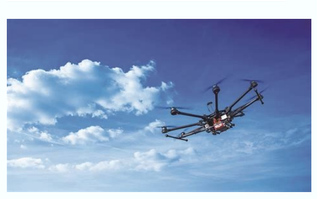

Continue

Guidelines for flying drones in india. Faa guidelines for flying drones. Are there rules for flying drones. Rules for flying drones at night. Rules for flying drones over houses. What are the rules for flying drones in the uk.

According to Indonesia’s national aviation authority, the Directorate General of Civil Aviation, flying a drone is legal in Indonesia, but we recommend being aware of and compliant with the drone regulations listed below before doing so. If you’d like to contact the Directorate General of Civil Aviation directly before you travel with any questions you might have, here is their contact information: hubud@dephub.go.id / +62 8 111 004 222 Why fly a drone in Indonesia? To get great aerial shots like these! General Rules for Flying a Drone in Indonesia Based on our research and interpretation of the laws, here are the most important rules to know for flying a drone in Indonesia. Drones may not fly above 150 meters (492 feet) without permission. Drones may not weight more than 7 kilograms (15.4 pounds). Drones may not be flown within 15 kilometers (9.32 miles) of any airport. Drones may not be flown over crowds or highly populated areas. Drones may not be flown at night. Drones may not be flown from any moving vehicle. Drone pilots must maintain a direct line of visual sight while flying. Penalties for non-compliance with these regulations are stiff, and include jail time and possible fines of up to 66,000 Euros. For more information on Indonesia drone laws, see this official document from 2016, and this guide to traveling to Indonesia with a drone from secondary source Bali Drone Production. Know something we don’t about drone laws in Indonesia? Send us an email at support[at]uavcoach[dot]com. We are not international aviation attorneys and do our best to keep this page up-to-date for drone pilots, but the reality is that given the pace of the small unmanned aerial system (sUAS) industry and how governments are responding, drone regulations in Indonesia can change throughout the year, and those changes can be hard to track. If we missed something, please reach out to let us know. Want to get a feel for the kind of footage you could get flying a drone in Indonesia? Here you go: Ministry of Transportation Republic of Indonesia Directorate General of Civil Aviation (DGCA) Updated July 14, 2022 UAS Laws – General rules for flying drones in Indonesia The Indonesian agency responsible for drone safety, DGCA, has provided a number of internet-accessible details on flying for fun or for work. The highlights are enumerated below. For more details go to the link above. Are drones allowed in Indonesia? According to DGCA, drone use is allowed in Indonesia, subject to strict DGCA regulations. Read on for more details. Here are the most important rules to know for flying a drone in Indonesia: Indonesia has a maximum flying altitude of 150 meters (= 500 feet). If you wish to fly higher, you must obtain permission at least 14 working days before the scheduled flight. Drone flights must be conducted within the pilot’s direct line of sight. Maximum horizontal distance and FPV: Drone flights must be undertaken in the pilot’s direct line of sight. There is no requirement to purchase aviation liability insurance for your drone now. Drones must have a maximum take-off weight (MTOW) of no more than 7 kilograms. Flights are permitted only in uncontrolled airspace. In addition, runways at airports must be at least 15 kilometers away from drone operations. Other safe distances include avoiding crowds and staying away from densely populated areas. The distance between the ground and the clouds must be at least 150 meters (vertical) or 600 meters (horizontal) (horizontal). From prohibited or restricted areas, drones equipped with cameras must maintain a minimum distance of 500 meters. Drones are permitted to operate in Indonesia only when the sun is visible. The law prohibits flights at night and in inclement weather. Minimum visibility of 4.8 kilometers is required. You should be aware that if your drone is equipped with a camera, it may approach the land border up to a maximum distance of 500 meters. In addition, drones may not be operated from a moving vehicle, except for vessels (boats, ships). Prohibited Areas According to the Indonesian Ministry of Transportation, certain areas are entirely off-limits to drone flights (dubbed “Forbidden Areas”), including but not limited to: Areas where flight activities are entirely prohibited (referred to as “Prohibited Areas”) Areas that are entirely designated for government aviation but may occasionally be opened to civil aviation. Fifteen kilometers from any aircraft runway and flights greater than 150 meters in altitude. Airspace that is controlled and where air traffic control, flight information, and alert services are provided. If your drone is equipped with a camera, you must maintain an additional 500 m safety distance from any prohibited flight areas. Penalties Will depend on the nature and severity of your infraction. The judges will also consider whether you committed the violation intentionally and/or for commercial gain. Failure to comply with local regulations may result in a fine of up to IDR 5,000,000 and up to three years in prison. Note for Foreign Operators Currently, there are no apparent restrictions on bringing drones into Indonesia (Bali), if the import is deemed legitimate (generally one drone per person). Notes for recreational drone pilots flying for fun in Indonesia In Indonesia, there is no requirement to register or obtain a permit for recreational drone use. However, if you are flying your drone recreationally, you must fly: At a maximum altitude of 150 meters above the ground. Away from moving vehicles, people, and large crowds. A drone that is less than 2 kilograms in weight. You must be at least 18 years old to participate. Do not fly from a moving vehicle from a fixed point. Maintain minimum flight visibility of 4.8 kilometers (15 kilometers) 15 kilometers away from airports (any airport, seaplane base, or area where aircraft or helicopters take off and land) and yield to all other aircraft types. Only during the day (no tolerance for night flights) and always within your sight. Keep a safe distance from clouds (150 m below & 600 m distance). At any given time, there is only one drone. Slower than 161 kilometers per hour and not under the influence of any drug or alcohol. If you wish to fly outside the limitations of Indonesia regulations (e.g., BVLOS), you must obtain permission from the Director-General of Civil Aviation (DGCA). It takes about two weeks to get, but keep in mind that these are typically granted only for government purposes. Notes for operating Commercial Drone Services in Indonesia You will have to follow all the steps and code of conduct of the recreational drone use practices. In addition, for any flight with a commercial purpose, you will systematically need: an authorization from the Director-General of Civil Aviation (DGCA) an insurance policy that covers your commercial activities Useful published information on flying drones in Indonesia Here is a sample of what you might expect if you follow the drone laws and fly in The Republic of Indonesia… NOTE: Small Unmanned Aerial Systems (SUAS), Small UAS, Remote Piloted Aerial Systems (RPAS), unmanned aerial vehicle (UAV), Unmanned Aerial System (UAS), and drone are interchangeable terms unless specified. Model aircraft, toy aircraft, Remote controlled aircraft, and RC aircraft may be covered by the same regulations unless specified. Traveling with a Drone? Click here to read our Comprehensive Guide For Traveling With A Drone Share on LinkedIn Share on Facebook Share on Twitter Share on Reddit Unmanned aircraft, such as drones are very popular for recreational and business use.But it’s an aircraft so can be a hazard to people, property and other aircraft. So it’s important to know the rules before you fly.Rules and regulations Part 101 rules when flying your unmanned aircraft You might consider your drone to be a fun toy, but did you know it's an aircraft? There are rules you need to follow while flying to keep yourself, others, and your aircraft safe. They are part of the New Zealand Civil Aviation Rules. Complying with them can also help you avoid fines or prosecution. We've created a simple to follow checklist. Watch the video or download the pdf below. Drone rules – Share the Skies Consider others, be responsible: Fly no higher than 120m (400ft) above the ground Stay a safe and considerate distance away from people and buildings Don't fly over private land, such as farms or houses, unless the owner says it's OK Keep your drone in sight at all times Stay 4 km away from anywhere aircraft are landing or taking off It's dangerous to fly drones anywhere other aircraft are operating Download Key Rules and Checklist [PDF 565 KB] Part 102 Unmanned Aircraft Operator Certification The objective of Part 102 is to lay out the requirements for the certification and operation of unmanned aircraft, outside of Part 101. Learn more about Part 102 certification or read the Part 102 rules. Your drone questions answeredWe've gathered together some of the most frequently asked questions about flying unmanned aircraft in New Zealand. Read all FAQs The permissions you need to fly your drone in New Zealand depend on how and where you want to fly. Airspace Stay 4kms away from all airports and helipads – unless you have clearance from the aerodrome operator. Check for any airspace restrictions before you fly. You may be able to fly in controlled airspace by obtaining air traffic control clearance from Airways. Do not fly in special use airspace without the permission of the administering authority of the area (eg, military operating areas or restricted areas).Check airspace - AirShare website(external link) People and property It's safer not to fly over people. If you need to, only fly above people if you have asked for their consent Get consent of the property owner or person in charge of the land you want to fly over. Check with your local council before flying in public places like parks and reserves. Your regional council’s website will have information about drone use in your area. You must apply for a permit from the Department of Conservation to fly over conservation land.Drone use on conservation land(external link) Learn more about the rules - Intro to Part 101 rules for unmanned aircraft Beaches, parks and lakes can provide excellent locations to enjoy flying your drone, and can provide settings for stunning photos and videos. However, there are three key things you need to actively check before you fly at these locations: Consent: Beaches and lakes can be privately owned, whereas parks are generally owned/administered by a local authority. Additionally, any of these places may be designated a Protected Area under the administration of DoC or a local authority. It is vital that you gain consent from the property owner or administering authority before flight. Some local authorities may have policies where blanket permission is given in some parks – check their websites for details. Beaches and lakes may have unoccupied water vessels – if you want to fly over these you will also need permission from the owner. Airspace: Any of these places may be in controlled airspace, within 4km of an aerodrome, or even in a no-fly zone. If this is the case, you will need to adhere to the restrictions of that airspace. Check the AirShare map(external link)(external link) to find the airspace, and see Intro to 101 Rules for flight near aerodromes, Controlled Airspace and No-Fly Zones sections of the CAA website to find out more. People: Beaches, parks and lakes draw lots and lots of people. Before you fly over anyone, including people in a water vessel, you will need their consent. At crowded locations this is almost certainly impractical, so just avoid flying over anyone. You don’t need a license to fly a drone in New Zealand. But you do need to follow the Part 101 drone rules, which are New Zealand Civil Aviation Rules.If you need to fly outside the Part 101 unmanned aircraft rules, you will need to hold a Part 102 unmanned aircraft operator certificate. Intro to Part 101 rules for unmanned aircraftIntro to Part 102 certification for unmanned aircraftTraining organisationsWe recommend getting some training so you understand your responsibilities when flying your drone. A number of organisations provide drone training in New Zealand.Model Flying New Zealand(external link) (Part 101) RPA Skills, Ryan Groves(external link) (Part 101)Aviation Safety Management Systems Ltd (ASMS)(external link) (Parts 101 and 102, UAV Agricultural Pilot Training) Flight Test New Zealand (external link)(Parts 101 and 102)FlyUAV(external link) (Parts 101 and 102) Massey University(external link) (Parts 101 and 102) Drone Training New Zealand(external link) (Parts 101 and 102)DroneZup(external link) (Parts 101 and 102, UAV Agricultural Pilot Training) Drone no-fly zones refers to controlled or special use airspace. Airspace can be designated as controlled or special use airspace. Controlled airspace is where there is a need for an air traffic control service to be provided for the safety and efficiency of aircraft operations. Special use airspace includes restricted areas, military operating areas, danger areas, and low flying zones. Airspace can be temporarily designated “Special Use” to help a police, military, or search and rescue operation. On the other hand, some areas are designated specifically for model aircraft flying. To fly a drone in controlled airspace, you must have prior authorisation from air traffic control. You can request this authorisation through AirShare. You don’t need authorisation from air traffic control if you can fly your drone using a shielded operation. AirShare – my flights(external link) AirShare – airspace map for drone pilots(external link) What is a shielded operation? Learn more about the rules - Intro to Part 101 rules for unmanned aircraft Drones can’t be flown outdoors at night, unless you are doing a shielded operation.What is a shielded operation? Learn about all the rules:
